

School of Computing Science Summary and Response Document (SARD)

Course name: COMPSCI 5012 Internet Technologies

Academic Session: S2 2023/2024

EvaSys questionnaire response rate: 16%

Summary of student comments	Response from Academic Staff	Action completion date (actual or expected, if required)	Action owner
Positive feedback			
Friendly teacher, good course structure. Easy to communicate.	Thank you for the positive feedback. We very much appreciate that you liked the organisation and content of this course.		
Have a deeper understanding of Internet Technology. Learn about the front end and backend cooperation which is based on Django.	Thank you for the positive feedback. We very much appreciate that you liked the organisation of this course and have a good understanding of the course content.		
Good teaching style	Thank you, we tried hard to make this course interesting		
Issues raised in EvaSys questionnaires			
Course content is outdated.	This course is teaching the fundamentals of developing web applications, assuming no previous knowledge. Therefore, it is not designed to go into these special topics in much depth. After taking this course you should be able to build simple web applications and deepen your understanding further.		
Bad experience with the group formations	There are benefits and limitations for assigned or self-selected approaches for forming groups. We believe that there is a slight advantage of assigned groups over self-selected groups with a mixed cohort such as this. However, we will review this aspect and accommodate self-selection group formation.	By next academic year	Course Convener
Issues raised at staff-student liaison meetings			

The lab exercises were felt to be too theory-dependent, requiring only close reference to the textbook material, and that the class would benefit from more practical labs.	The labs are designed as a drop-in session to learn how to use Django framework to deploy the web applications. The practice of this is the group project that employs the Django framework to design and implement the web applications. We clarify this at the very beginning of the course and add more clear connections to the practical group assignments. So the lab session will serve as the learning practices towards the targets of the three group assignments.	By next academic year	Course Convener
