

School of Computing Science Summary and Response Document (SARD)

Course name: Human Computer Interaction Design and Evaluation (HCIDE), COMPSCI5057

Academic Session: Jan-Mar 2025

EvaSys questionnaire response rate: 12.3%

Summary of student comments	Response from Academic Staff	Action completion date (actual or expected, if required)	Action owner
Positive feedback			
Students appreciate the content, slides, and blend of theory and practice	We appreciate the feedback and will continue to improve the content for future years.	n/a	
Issues raised in EvaSys questionnaires			
Coursework workload is too high, and its weight on overall grades disproportionately low	We appreciate the feedback; this issue has been reported in previous years, and this year we attempted to reduce the workload by clarifying expectations in the assignment sheets and restructuring the coursework, however even with these modifications the workload was still too high. We will redesign the coursework for next year, including reducing the number of assessed assignments to 2, and providing structured spread the work more evenly through the semester.	Dec 2025	Mathieu Chollet, Xianghua (Sharon) Ding
Students would prefer remote lectures to be avoided	We appreciate the feedback and agree that face-to-face lectures are always preferable. We had to resort to remote lectures twice this year due to unforeseen circumstances, and will strive to avoid it completely next year.	n/a	
Issues raised at staff-student liaison meetings			

Context statement from the Course Leader (optional):
